

# Who Lives Where?

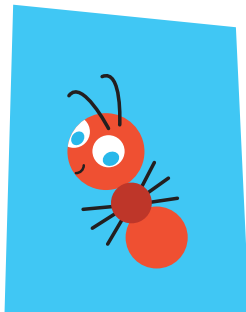

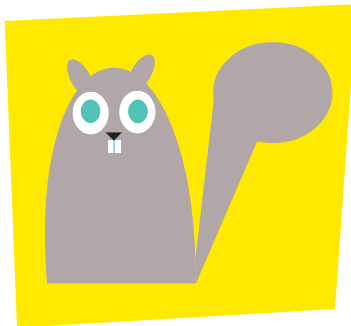

Many animals build their own homes. They use materials they find in nature.

1. Read the descriptions of the animal homes below, and compare them to the pictures of animal homes on the right.
2. Draw lines connecting the animals on the left to their correct home on the right.

**SQUIRRELS** live in nests up in trees. These nests are called dreys. Dreys are made of leaves, twigs, vines, and moss.

**ROBINS** build nests out of grass, twigs, and mud. A mama robin will fill her nest with beautiful blue eggs.

**ANTS** build homes underground. An anthill, the entrance to their home, is above ground. It looks like a little pile of dirt or sand with a hole in it.

Learn more about nature with *PBS Kids Look and Learn Nature Detective*. This kit comes with a book, a magnifying glass, a portable laminated scavenger hunt (perfect for nature walks!), and an activity poster.
